

CLAIM AMENDMENTS

Claims pending:

- At time of the Office Action: Claims 1-31.
- After this Response: Claims 1-7, 9, 19-22, 24-31.

Canceled claims: 8, 10-18, and 23.

Amended claims: 1, 19, 27, and 30.

New Claims: None.

The listing of claims below will replace prior versions of claims in the application:

1. (Currently Amended) A method comprising:
encoding a first frame of data;
generating a first timestamp associated with the first frame of data, wherein the first timestamp includes complete timing information, and wherein the first timestamp is a full timestamp;
transmitting the first frame of data and the associated first timestamp to a destination;
encoding a second frame of data;
generating a second timestamp associated with the second frame of data, wherein the second timestamp includes a portion of the complete timing information, and wherein the second timestamp is a compressed timestamp; and
transmitting the second frame of data and the associated second timestamp to the destination.

2. (Original) A method as recited in claim 1 further comprising:
encoding a third frame of data;
generating a third timestamp associated with the third frame of data,
wherein the third timestamp includes a portion of the complete timing
information; and
transmitting the third frame of data and the associated third timestamp to
the destination.

3. (Original) A method as recited in claim 1 further comprising:
identifying timing information related to transmitting the first and second
frames of data; and
transmitting the timing information to the destination.

4. (Original) A method as recited in claim 1 wherein the first timestamp
includes hour information, minute information, second information, and a frame
number.

5. (Original) A method as recited in claim 1 wherein the first timestamp
includes an offset value that is used to relate the time associated with a frame of
data to true time.

6. (Original) A method as recited in claim 1 wherein the second timestamp includes a frame number.

7. (Original) A method as recited in claim 1 further comprising:
encoding a plurality of frames of data; and
generating additional timestamps associated with each of the plurality of frames of data, wherein the majority of the additional timestamps include a portion of the complete timing information.

8. Canceled.

9. (Original) One or more computer-readable memories containing a computer program that is executable by a processor to perform the method recited in claim 1.

10 - 18. Canceled.

19. (Currently Amended) A method comprising:

receiving a first frame of data;

receiving a first timestamp associated with the first frame of data, wherein the first timestamp includes complete timing information for the first frame of data;

receiving a second frame of data; and

receiving a second timestamp associated with the second frame of data, wherein the second timestamp includes a portion of the timing information, and wherein the first timestamp is a full timestamp and the second timestamp is a compressed timestamp.

20. (Original) A method as recited in claim 19 further comprising decoding the first frame of data and the second frame of data.

21. (Original) A method as recited in claim 19 further comprising:

receiving a third frame of data;

receiving a third timestamp associated with the third frame of data, wherein the third timestamp includes a portion of the timing information; and

decoding the third frame of data.

22. (Original) A method as recited in claim 19 further comprising receiving timing information related to the manner in which frames of data are transmitted from a data source.

23. Canceled.

24. (Original) A method as recited in claim 19 wherein receiving the first timestamp includes updating all timing parameters with the information contained in the first timestamp.

25. (Original) A method as recited in claim 19 wherein receiving the second timestamp includes updating timing parameters with the information contained in the second timestamp.

26. (Original) One or more computer-readable memories containing a computer program that is executable by a processor to perform the method recited in claim 19.

27. (Currently Amended) One or more computer-readable media having stored thereon a computer program that, when executed by one or more processors, causes the one or more processors to:

encode a first frame of data;

generate a first timestamp associated with the first frame of data, wherein the first timestamp includes complete time information;

encode a plurality of subsequent frames of data; and

generate a plurality of subsequent timestamps, wherein each of the subsequent timestamps includes a portion of the time information, wherein the

first timestamp is a full timestamp and the plurality of subsequent timestamps are compressed timestamps.

28. (Original) One or more computer-readable media as recited in claim 27 wherein the complete time information includes hour information, minute information, second information, and a frame number.

29. (Original) One or more computer-readable media as recited in claim 27 wherein each of the subsequent timestamps includes a frame number.

30. (Currently Amended) An apparatus comprising:

an encoded multimedia content source; and

a decoder coupled to receive encoded multimedia content from the encoded multimedia content source, wherein the video content includes a first frame of data having an associated first timestamp, such that the first timestamp includes complete timing information for the first frame of data, and wherein the encoded multimedia content includes a second frame of data having an associated second timestamp, such that the second timestamp includes a subset of the timing information included in the first timestamp, and wherein the first timestamp is a full timestamp and the second timestamp is a compressed timestamp.

31. (Original) An apparatus as recited in claim 30 wherein the decoder is configured to decode the first frame of data and the second frame of data.
